OpenSDG

Do you work with Sustainable Development Goals data?

What is Open SDG?

Open SDG is an open source, free-to-use platform for managing and publishing data and statistics related to the Sustainable Development Goals, which were agreed by all UN member states.
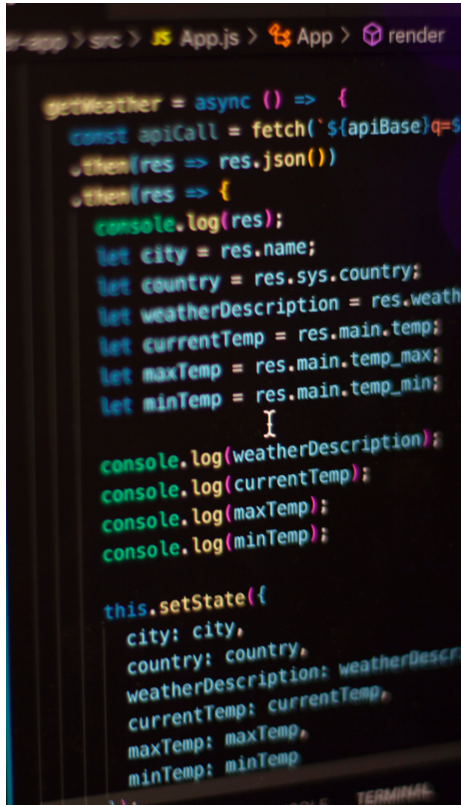

Why use Open SDG?

- Identify data gaps
- Gather, publish and track data
- Easy access to statistics and metadata
- Improve communication between data providers, National Statistics Offices and other stakeholders

Create your own platform

You can create your own Open SDG platform in **less than one hour** with no prior knowledge. Our Open SDG tutorials will walk you through creating, customising and maintaining your platform.

Platform features

Open SDG's features include, but are not limited to:

- Multiple languages can be added to the site
- Several types of charts can be used to display data (bar, line and binary)
- Maps can be used to display data
- Progress can be reported on goals and indicators

As the needs of our users develop, so does Open SDG. You can read about the latest additions to Open SDG here.

Interesting reads

We have an Open SDG blog where you can read about topics such as, our vision, creating an Open SDG platform, an introduction to SDMX, and how to prepare for Open SDG 2.0.0.
